## **DETAILED ACTION**

### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

The prior art does not teach an output control circuit that generates an output control signal that controls the output of each component based on a decimation pattern that is determined dependent on a format of the input image data and a reduction ratio, the generating circuit including a switch circuit that controls the output of each component based on the output control signal. Therefore, the claims are allowed over the prior art.

Furthermore, the prior art does not teach the use of the counting circuit that counts input luminance components and resets counted value in the case where the counted value reaches a reciprocal number of the reduction ratio so as to restart counting based on information about the format of the image data and the reduction ratio in combination with the remaining limitations of Claim 3. Therefore, the claim is allowed over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
